

Technical Bulletin

Dual Mass Flywheel

Vehicle Type

Part Number

Passenger Car

843654, 843655, 404956,
836050

How should flywheels be transported and stored?

Storage Position

Here you can see the correct way of keeping the DMF carton box during transportation and storage time. The boxes should be kept horizontally upright position as shown in the first picture - the label should be straight to read

It should not be vertical or inverted as it may cause damages to the flywheel

All the Parts should be kept upright always and stacking standards should be followed always while storing the parts

Dropped DMF box? What should we do?

If a package or product is dropped or lowered without

care, ensure the unit contains no damage or do not attempt to fit the parts!

Fitting the dropped DMF may cause product complaints and may not be entertained under warranty. Hence please avoid fitting those dropped products in the vehicles

Dual mass flywheels are very sensitive to shocks and damages, even from a height of 30cm.

If a package is delivered containing Valeo products in a box that has been dropped or contains impact damage, the delivery should be rejected.

If you receive any Valeo product boxes in a condition as shown here, please report immediately to the concerned people and avoid using these parts for sales or fitting.
